PROFESSIONAL SUMMARY

Motivated and detail-oriented Computer Engineering fresher. Proficient in HTML, CSS, JavaScript, PHP, and Python, with a strong foundation in Git-based version control. Seeking an entry-level software developer or web development internship role where I can contribute meaningfully, grow rapidly, and solve real-world problems through code.

TECHNICAL SKILLS

Languages & Web: HTML5, CSS3, JavaScript (ES6+), PHP, Python (Basic)

Tools & Platforms: Git, GitHub, VS Code, Chrome DevTools

Soft Skills: Problem-solving under pressure, Cross-functional collaboration, Self-directed learner

PROJECTS

Hotel Booking Management System | [HTML](#) · [CSS](#) · [JavaScript](#) · [PHP](#)

- Engineered a full-featured booking portal handling 50+ mock reservation records, with a dynamic room-availability engine that filters results by date and room type in real time.
- Implemented a multi-step booking form with client-side validation (regex, required-field checks) and a PHP back-end that stores, retrieves, and updates reservation data.
- Built a password-protected admin dashboard to add/edit/delete rooms, view all bookings, and export a summary—reducing manual tracking effort by an estimated 60%.
- Gained practical experience in MVC-style separation of concerns, session management, and responsive CSS layouts using Flexbox.

Website UI Clone (Myntra) | [HTML](#) · [CSS](#) · [Responsive Design](#)

- Recreated the complete Myntra e-commerce homepage pixel-perfectly using only HTML and CSS, achieving visual accuracy across desktop, tablet, and mobile viewports.
- Leveraged CSS Grid and Flexbox for the product-card layout and employed media queries at 768px and 480px breakpoints to ensure a fluid, mobile-first experience.
- Applied advanced CSS techniques including CSS variables, smooth hover transitions, sticky navigation bar, and animated banner—matching the live site's interaction feel.
- Reduced average image load time by optimising asset sizes and using lazy-loading attributes, improving perceived page performance.

Tic-Tac-Toe Game | [HTML](#) · [CSS](#) · [JavaScript](#)

- Developed a fully interactive two-player Tic-Tac-Toe game using vanilla JavaScript, implementing win-detection logic that evaluates all 8 winning combinations after every move.
- Engineered draw-condition detection and a live score-tracker that persists across rounds without page refresh, improving session continuity.
- Used DOM manipulation (querySelector, classList, addEventListener) to update the board state, highlight winning cells, and render result banners dynamically.
- Added a one-click restart button that resets board state while preserving cumulative scores, demonstrating clean separation between UI state and game logic.

Rock Paper Scissors Game | [HTML](#) · [CSS](#) · [JavaScript](#)

- Built a single-player browser game where the computer opponent selects moves using Math.random()—ensuring unpredictable, fair gameplay in every round.
- Implemented a persistent score counter (player vs. computer) with CSS-animated result cards that visually indicate Win / Lose / Draw outcomes within 300 ms.
- Designed a fully responsive layout with themed button icons and hover micro-animations that enhance user engagement without relying on any external libraries.
- Practiced modular JavaScript by separating game logic, DOM rendering, and score management into distinct functions—improving readability and ease of future extension.

EDUCATION

CERTIFICATIONS & COURSES

Web Development Course | *Indian Institute of Computer Learning (IICL), Surat*

- ▶ Completed a structured curriculum covering HTML, CSS, JavaScript, PHP, and Python fundamentals with hands-on project assignments.
- ▶ Practised real-world coding tasks including form validation, database connectivity with PHP & MySQL, and responsive design principles.
